

**FALL 2017-18**  
**ENV-3025 / UIC-3025**  
**ISSUES IN SUSTAINABLE CITIES**

**FRIDAYS, 12:45 PM TO 3:45 PM**

This course addresses issues of sustainable urban development. Topics may include the following: world population growth and urbanization in developed and developing countries; the impact of technology, trade, and commercial globalization on urban environments; the degradation of land, water, and air inside of cities and in their bio-regions; the consumption of fossil fuels and the local and global impact of their combustion; the politics of sustainable urban development; the role of planning and urban administrative practices and policies in environmental degradation and mitigation; and the place of local environmental initiatives in national environmental actions.

Pre-requisites: GEOG-2414 or UIC-1001 or permission of instructor.
