

Critical Environmental Issues:

Ecology and Management of Species at Risk in MB

FALL 2018

ENV-4614-050/GBIO-7614-050

Tuesdays 6:00 -9:00 pm

Instructor: Bill Watkins

LEARN what constitutes a Species at Risk and review the factors that lead to listing under endangered species legislation.

GAIN a thorough understanding of the legislation and policy framework that governs management of species at risk.

EXAMINE management principles and practices for recovery of species at risk and for preventing additional species from becoming endangered.

DISCUSS techniques to manage working landscapes for ecological integrity, and the design and management of protected area networks.

STUDY real world case studies of recovery efforts and management plans for species found in Manitoba.
